| | • **Test Manager [**2024 to till date]<br>  ○ Mainframe Modernization to Google Cloud environment.<br>  ○ IT Infrastructure Testing<br>• **Test Manager/Scrum Master** [2021 to 2024]<br>  ○ Test Management, Azure DevOps, SAFe Agile<br>  ○ Building quality products<br><br>• **Test Manager/ Deployment Prime** [2019 to 2022]<br>  ○ Test Management, Azure DevOps<br>  ○ Building quality products<br>• **Business Analyst** [2017 to 2018]<br>  ○ MS Visio<br>  ○ In-person User facing experience to gather requirements<br>• **Test Lead** [2012 to 2020]<br>  ○ Manual testing<br>  ○ Received many appreciations from clients for quality delivery.<br>• **Test Analyst** [2007 - 2012]<br>  ○ Testing<br>  ○ Good Team player and quick learner |

## PROFESSIONAL EXPERIENCE

**Project – Tesco Bank– Test Manager at Zensar [Sep'2025 to Feb'2026]**

**Role:** Test Manager

**Project Description: Tesco Bank** is a British retail banking brand operating as a trading name of Barclays. As part of the IT Infrastructure testing, all aspects of IT infrastructure, including hardware, networks, storage, and servers, are thoroughly tested to meet the company's requirements for performance, security, and reliability. The Test Lead is responsible for overseeing testing strategies, planning, execution, and reporting for IT infrastructure projects, ensuring that systems function as intended before they go live.

**Key activities performed:**

- Develop comprehensive test plans for IT infrastructure projects, including networks, servers, cloud services, and data center.
- Define testing objectives, scope, resources, and timelines.
- Align testing goals with business objectives and technical requirements.
- Create detailed test strategies covering performance, scalability, security, load, and disaster recovery testing.
- Plan for both manual and automated testing of IT infrastructure components.
- Oversee the execution of various tests, such as network stress testing, server load balancing, disaster recovery scenarios, and penetration testing.
- Coordinate with network engineers, system administrators, and other IT professionals during the testing process.
- Identify risks early in the process and create mitigation plans.
- Ensure that the infrastructure is resilient to failures and capable of recovering from disaster scenarios.
- Generate test reports and provide detailed documentation of findings, issues, and suggestions for improvements.
- Track testing progress and outcomes for stakeholders.
- Work closely with infrastructure architects, system admins, network engineers, and business units to understand requirements and ensure that the infrastructure is designed for performance, security, and reliability.
- Act as the bridge between the development team and operations team.
- Continuously evaluate test processes and tools to improve efficiency.
- Stay updated on the latest trends and technologies in IT infrastructure testing.

**Technology/Skills/Tools used**

- Tools**:** Excel, MS Word, Teams
- Technologies: AWS, Azure, Google Cloud

- Skills: In-depth understanding of IT infrastructure (servers, networking, cloud platforms, storage, databases, etc.). Knowledge of networking protocols, security testing tools, and methodologies (e.g., penetration testing, vulnerability scanning).

**Project – JLP, UK– Tech Modernization at Zensar [Sep'2024 to Feb' 2025]**

**Role:** Test Manager

**Project Description:** A leading retailer operates department stores, supermarkets and financial services in the UK. As part of the Tech Modernization project, 40+ mainframe applications are to be migrated to Google Cloud environment. Working as an QA lead in understanding the functionalities of mainframe applications and ASIS approach.
The project is working under the Refactor model (2 applications in phase 1) with the support from third party vendors in migration of the existing mainframe programs to JAVA and validating the functionalities in GCP environment with DB2 replaced with Postgres SQL and JCL replaced with Groovy scripts.

**Key activities performed:**

- Develop comprehensive testing strategies, including automated, functional, regression, performance and User acceptance testing (UAT) for the migrated environment.
- Establish clear, quantifiable KPIs for migration success, such as zero data loss, uptime targets, and performance benchmarking.
- Risk Management - Identify risks related to data loss, increased downtime, or compatibility issues, and develop mitigation strategies.
- Implement automated tests for mainframe application code changes before and during migration.
- Establishing Environments - Prepare testing instances in GCP, leveraging JIRA Quality Management for validation
- Execution and Monitoring – Verify data conversions and ensure data integrity between legacy systems and GCP based databases.
- Performance and Load testing – Conduct load testing to ensure the new cloud infrastructure meets or exceeds legacy performance levels.
- Manage CI/CD Integration – Integrate testing into DevOps pipelines for automated testing during the migration process.
- Coordinate Testing Workflows – Oversee testing teams, ensuring collaboration with development and DevOps teams for smooth deployment.
- Post-Migration Validation – Validate application functionality post-migration, ensuring that batch jobs, CICS transactions, and online applications operate correctly.
- Post-Implementation Review – Support reviews to ensure compliance with security standards and identify areas for continuous improvement.

**Technology/Skills/Tools used**

- Tools**:** JIRA, Confluence, Zephyr, Postgres, GKE, Google cloud Data validation Tool
- Technologies: Mainframe – JCL, COBOL, DB2
- Skills: Modernization, Testing, Agile, GCP, groovy scripts

**Project –CIBC (Canadian Imperial Bank of Commerce) at CGI [Jan 2024 to Aug 2024]**

**Role:** Test Manager

**Project Description: Migrating and modernizing the account and card management applications from Mainframe to AWS using Micro Focus**

**Key activities performed: Client facing role to ensure quality control**

- Define the overall QA strategy for mainframe-to-Micro Focus AWS migration.
- Establish test plans, test approaches, and quality gates for each Migration phase.
- Coordinate setup of Micro Focus Enterprise Server test environments with infra and platform teams.
- Identify test environments, data needs, and tooling.
- Ensure configuration of CICS, JCL, DB2/IMS emulation on MF Enterprise Server and Batch schedulers.
- Oversee implementation of Micro Focus test automation, Test data management tools and CI/CD pipelines.
- Ensure comprehensive test coverage for COBOL, JCL, CICS, DB2/IMS components and Online vs batch equivalence.

- Drive creation of detailed functional test cases, technical test scenarios for regression and performance, batch cycle validation scripts and exception scenarios and error-handling tests.
- Design and run parallel test cycles between Legacy mainframe and Micro Focus environment and compare outputs.
- Provide test execution dashboards and KPIs for Program managers, Architects and Business & SMEs. Publish go/no-go reports for each test cycle.
- Conduct load testing to ensure the new cloud infrastructure meets or exceeds legacy performance levels.
- Validate application functionality post-migration, ensuring that batch jobs, CICS transactions, and online applications operate correctly.
- Support reviews to ensure compliance with security standards and identify areas for continuous improvement.
- Manage distributed QA teams: onsite, offshore, vendor teams.

**Technology/Skills/Tools used**

- Tools**:** Micro Focus Enterprise Analyzer, Micro Focus Enterprise Server (on AWS)
- Technologies: Mainframe, AWS Mainframe Modernization, AWS CodeBuild, Amazon EC2.
- Skills: Modernization, Test Management, Agile

**Major achievements**

- Awarded Silver award.

**Any client appreciation**

- Appreciated by client for quality and timely delivery.

**Project –NYPA at CGI [Oct 2022 to Oct 2023]**

**Role:** Test Manager/ Scrum Master

**Project Description: The New York Power Authority (NYPA) is the nation's largest state public power organization, with 16 generation facilities and more than 1,400 circuit miles of transmission lines. Project is to Migrate the SharePoint 2016 sites to O365.**

**Key activities performed: Migration Testing**

- Define roles and responsibilities of all entities involved.
- Provide Sign off on the test deliverables and test results.
- Ensure Quality Control.

**Technology/Skills/Tools used**

- Tools: Azure DevOps
- Technologies: SharePoint, Power BI, Power Apps
- Skills: Test Management

**Major achievements**

- Best Team Award

**Any client appreciation**

Appreciated by client for quality and timely delivery.

**Project –BELL at CGI [Oct 2019 to Sep 2022]**

**Role:** Test Prime/ Deployment Prime/ Scrum Master

**Project Description: Bell Canada is a Canadian telecommunications company headquartered in Montreal, Quebec, Canada.**

**Key activities performed: Core Payment handling system testing.**

- Define roles and responsibilities of all entities involved.
- Provide Sign off on the test deliverables and test results.

- Ensure Quality Control.
- Coordinate with multiple teams for the deployment activities.
- Manage PIS Trouble Tickets.
- Chairperson for conference calls, maintain distribution list, deliver PIS Report and Supporting Information to meeting participants, provide status on trouble tickets, engage SME as required for trouble tickets, ensure clear description of problem, resolution, and root cause are provided and documented in Remedy.

**Technology/Skills/Tools used**

- Tools: JIRA, AP ALM
- Technologies: Java
- Skills: Test Management

**Major achievements**

- Gold Award

**Any client appreciation**

Appreciated by client for quality and timely delivery.

**Project –MAPFRE at CGI [Jul 2017 to Sep 2019]**

**Role:** Test Lead

**Project Description:** Mapfre (American Commerce Insurance Company) is a property and casualty application built to automate the insurance business.

**Key activities performed: Core Payment system testing for Insurance.**

- Define roles and responsibilities of all entities involved.
- Provide Sign off on the test deliverables and test results.
- Ensure Quality Control.

**Technology/Skills/Tools used**

- Tools: JIRA, AP ALM
- Technologies: Java
- Skills: Test Management

**Major achievements**

- Pegasus

**Any client appreciation**

Appreciated by client for quality and timely delivery.

**Project –MUNICHRE at CGI [Feb 2012 to Jun 2017]**

**Role:** Test Lead / Business Analyst

**Project Description: Munich Re Group (Munich Reinsurance Company, German: Münchener Rück) is a reinsurance company based in Munich, Germany.**

**Key activities performed: In-person Client interaction from Onsite.**

- Define roles and responsibilities of all entities involved.
- Provide Sign off on the test deliverables and test results.
- Ensure Quality Control.
- Prepare the Project requirement documents and use cases.

**Technology/Skills/Tools used**

- Tools: TFS, AP ALM, MS Visio
- Technologies: Java
- Skills: Test Management

**Major achievements**

- Pegasus

**Any client appreciation**

Appreciated by client for quality and timely delivery.

**Project –Bank of America at Infosys [Aug 2007 to Jan 2012]**

**Role:** Test Analyst

**Project Description: Bank of America brings the power of our human and financial capital to transform communities into vibrant, desirable places for people to live, work and raise families. They develop projects in conjunction with non-profit community-based CDCs and local government organizations.**

**Key activities performed: Key Performer**

- Understanding the complete functionality of the application.
- Preparation of Test data, Test Scenarios and Test cases.
- Executing Test Cases to validate the Functionality.
- Giving mandatory information of a defect to developers to fix it.
- Communication with the Test Lead / Test Manager.
- Performed in System, Functional and Regression Testing

**Technology/Skills/Tools used**

- Tools: AP ALM
- Technologies: Java
- Skills: Testing

**Major achievements**

**Any client appreciation**

**Project –PepsiCo at Infosys [Mar 2008 to Jun 2009]**

**Role:** Test Analyst

**Project Description: PepsiCo, Incorporated is a Fortune, American Multinational Corporation headquartered in Purchase, NY with interests in manufacturing and marketing a wide variety of carbonated and non- carbonated beverages, as well as salty, sweet and grain-based snacks, and other foods.**

**Key activities performed:**

- Executing the Regression Test Cases and reporting bugs.
- Record the result as Pass or Fail.
- Record any new defects uncovered during the test case execution.
- Involved in executing the CR.

**Technology/Skills/Tools used**

- Tools: AP ALM
- Technologies: Java
- Skills: Testing

**Major achievements**

**Any client appreciation**

**Project – Foundation Program at Infosys, Mysore [Oct 2007 to Feb 2008]**

**Role:** Trainee

**Project Description: As a part of foundation program, generic and stream, specific training was imparted. The generic training comprised of modules covering Computer Hardware and Systems Software concepts, Programming Fundamentals, Relational Database Management Systems, Web Technologies and Architecture, User Interface Design, Algorithm Analysis. Stream training on software testing comprises of modules SDLC, Types of Testing, Testing Life Cycle and Manual Testing.**

**Key activities performed:**

- Undergone Training

**Technology/Skills/Tools used**

**Major achievements**

**Any client appreciation**
